

Winter Excellence

5 STEPS to a stronger, more durable turf surface

Start the winter playing cycle on your fields with a 5 step seeding strategy that will optimize your turf's ability to deal with the toughest winter sport.

1 PrimoMAXX

Slow the growth of your warm season grass with PrimoMAXX. Give ryegrass seedlings a chance to see the light, by reducing competition with a targeted Primo application.

PrimoMAXX reduces cell elongation

2 Seed

Living Turf supply the freshest turf ryegrass, direct from the farm gate in Canterbury, NZ. Handpicked products include **CARAVELLE** (unique endophyte free, turf rye), **RELIANT II** (NZ bred, sportsturf rye), **SPORTS BLEND** (blend of fine dark and sturdy, North American bred rye) and **FRONT ROW BLEND** (the ultimate winter active turf ryegrass).

Council Soccer fields – July 07

3 MP Sustain

MP Sustain will hold water around the seed for more reliable germination. Simply spray MP Sustain and leave it sitting in the thatch for best results.

4 SubdueMAXX

Protect your investment with SubdueMAXX. Guard against Damping off on young seedlings. Early establishment requires regular water and is normally accompanied by late summer/ autumn heat – perfect conditions for this virulent turf disease.

Pythium blight can be disastrous to seedling mortality

5 Starter

Simplot Prostart is a high P fertilizer, accompanied by controlled release N, so the young seedling has something in reserve to service its nutritional needs out as far as week 6 to 8.

Call Living Turf to establish which seed product best suits your requirements

Caravelle

Breeding pre-dates the introduction of 'acremonium' endophyte to turf ryegrasses.

Carvelle possesses excellent colour, vigour and growth characteristics and forms a dense attractive sward. In a transitional climate, **Carvelle** presents less allelopathy (toxicity to neighbouring grasses) than modern turf ryegrasses and is unsurpassed in regard to warm season transition.

Reliant II

Is an attractive, dark green turf ryegrass with excellent germination properties and cold weather germination down to 5°C. **Reliant II** has excelled in turf trials for year round growth, dark colour, density and disease resistance. It excels in hot, dry conditions, while its winter activity provides good wear tolerance and competition to invasive species such as *Poa annua*.

Front Row Blend

Is a versatile blend of NZ grown turf ryegrasses that come together for excellent winter activity and year round wear resistance. **Front Row Blend** is specifically designed for high use winter sports fields with a high level of disease resistance and above average tolerance to insects. **Front Row Blend** forms a dense turf cover with good colour and excellent mowing characteristics.

Sports Blend

This is a top notch blend of fine, dense and dark green turf type ryegrasses. Use **Sports Blend** for tees, high end lawns and general sports turf use. **Sports Blend** possesses a broad genetic make-up, providing versatility in a wide range of climates and environments. As a cost effective option, **Sports Blend** presents excellent value for money and is priced way below its value.
